PROFILE SUMMARY

Final-year Informatics Engineering student at Universitas Bhayangkara Jakarta Raya (GPA: 3.75/4.00) with a strong foundation in Full-Stack Development and Software Engineering. Experienced in architecting modern web applications, integrating AI/deep learning models, and leveraging AI coding assistants (GitHub Copilot, Claude, Gemini) to optimize development workflows and code quality. Proficient in building high-performance solutions using Go (Fiber), Node.js/Express, Laravel 12, React (TypeScript), Vue (Inertia.js), and Python (Flask), backed by proven leadership and Distinction honors from the DBS Foundation Coding Camp.

FEATURED PROJECTS

Eco-Wise – Waste Management & Gamification Platform **June 2026**

Team Leader & Frontend Developer | React.js, RESTful API, Express.js

- Spearheaded a cross-functional engineering team of 6, orchestrating sprint planning, task delegation, and full lifecycle delivery of a waste-sorting awareness application.
- Architected a responsive user interface with React.js, integrating backend RESTful APIs for real-time task verification and daily community activity feeds.
- Designed and implemented gamification mechanics (daily scan streaks, task completions, and reward points) to incentivize consistent waste segregation habits.

Smart Split Bill Application **September 2026**

Full-Stack Developer | React.js, TypeScript, Go (Fiber), RESTful API

- Architected a full-stack financial splitting application utilizing React with TypeScript for robust, type-safe client-side state management and form handling.
- Built a high-concurrency, lightweight RESTful backend using Go and the Fiber web framework, handling automated bill splitting calculations, tax distributions, and service fees.
- Implemented modular API endpoints with structured JSON responses, optimizing calculation latency and ensuring accurate proportional cost distribution among group members.

Scholarship Decision Support System (DSS) **September 2026**

Full-Stack Developer | Laravel 12, Vue.js, Inertia.js, LLM APIs (Groq, Gemini), MySQL

- Built a modern Decision Support System (DSS) using Laravel 12 and Vue.js (Inertia.js), automating multi-criteria weighted scoring to rank scholarship candidates objectively.
- Integrated LLM APIs (Groq and Google Gemini) to generate automated qualitative rationale, providing transparent, context-aware explanations on why candidates qualified or were rejected.
- Designed structured prompt engineering pipelines and API integrations, ensuring fast inference and consistent JSON-formatted evaluation summaries.
- Engineered administrative dashboards with role-based access control and dynamic data tables, accelerating committee evaluation workflows and decision-making transparency.

MangoAI: Web-Based Mango Disease Detection System **September 2025 – January 2026**

Machine Learning & Backend Developer (Team of 2) | Python, Flask, VGG16, Transfer Learning, HTML5, CSS3

- Collaborated in a 2-person engineering team to develop and deploy an AI-assisted diagnostic web platform capable of identifying 4 distinct mango leaf diseases along with healthy foliage.
- Fine-tuned a VGG16 Convolutional Neural Network (CNN) architecture via Transfer Learning, attaining an optimal test classification accuracy of 98.00%.
- Built the lightweight web interface and backend using Flask, creating an end-to-end inference pipeline that processes uploaded leaf images and outputs real-time diagnostic predictions.

EDUCATION

UNIVERSITAS BHAYANGKARA JAKARTA RAYA September 2023 - Present

Bachelor of Science in Informatics Engineering

- Current GPA: 3.75 / 4.00
- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Web Programming, Software Engineering, Artificial Intelligence

CERTIFICATION & AWARDS

- Coding Camp 2026 (Full-Stack Web Track) — Dicoding x DBS Foundation | July 2026 Achieved Distinction Graduate status (Top-tier capstone performance & course completion).
- Code Generation and Optimization — Hacktiv8 x IBM SkillsBuild | 2025
- Frontend & Backend Development Certifications — Developer Student Club | 2024 – 2025

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript (ES6+), PHP, Python, SQL, HTML5, CSS3

Frontend: React.js, Next.js, Vue.js, Inertia.js, Tailwind CSS, Responsive Web Design

Backend & Frameworks: Go (Fiber), Node.js, Express.js, Laravel 12, Flask, RESTful APIs, System Design (UML)

Databases & Cloud: MySQL, PostgreSQL, Google Cloud Platform / AWS Cloud fundamentals

AI & Machine Learning: LLM API Integration (Groq, Gemini), Prompt Engineering, Deep Learning Model Integration, VGG16, Transfer Learning, Computer Vision

AI Assistants & Productivity: GitHub Copilot, Claude, Gemini, ChatGPT (Prompting & AI-Assisted Development)

Tools & Methodologies: Git, GitHub, VS Code, Agile/Scrum Collaboration, Postman

ORGANIZATIONAL EXPERIENCE

Developer Student Club, Universitas Bhayangkara Jakarta Raya November 2024 – February 2025

Technical Member

- Engaged in technical workshops focusing on modern frontend and backend development, participating in peer code reviews, architectural discussions, and collaborative projects.
